Power BI Study Case Project

Identifying Indonesia's Most Promising Markets Through Data-Driven Purchasing Power and Inflation Trends

Daniel Lincoln Ginting
Data Analyst & Project Management Enthusiast

Why Population Alone Is Not Enough

Expansion plans often follow population size and overlook how much people can spend and how fast costs are rising. A large market with weak purchasing power or rising prices can still leave thin margins. This project turns regional statistics into a dashboard that shows where wages are strong, where price pressure is low, and where risk is building.

The dashboard combines provincial price index (CPI), minimum wage, and population data for 2024 and 2025. In Power Query, I standardized data types and created a month index column used with Sort by Column so trends run from January to December. The model follows a star schema with a fact table and a province dimension, and DAX measures such as Avg_Inflation and Market_Score feed three pages: Executive Summary, Market Size & Income, and Inflation & Cost Risks.

Key Objectives

01 **Find Expansion Sweet Spots**

02 **Compare Volume and Wealth**

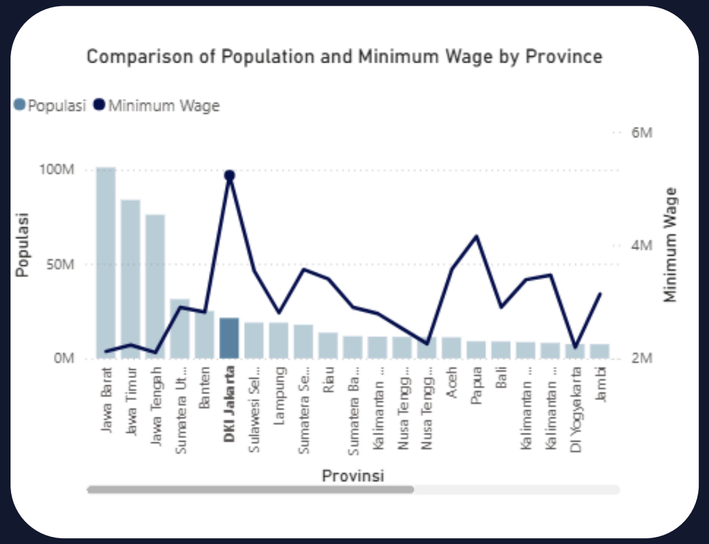

03 **Flag Cost Risks Early**

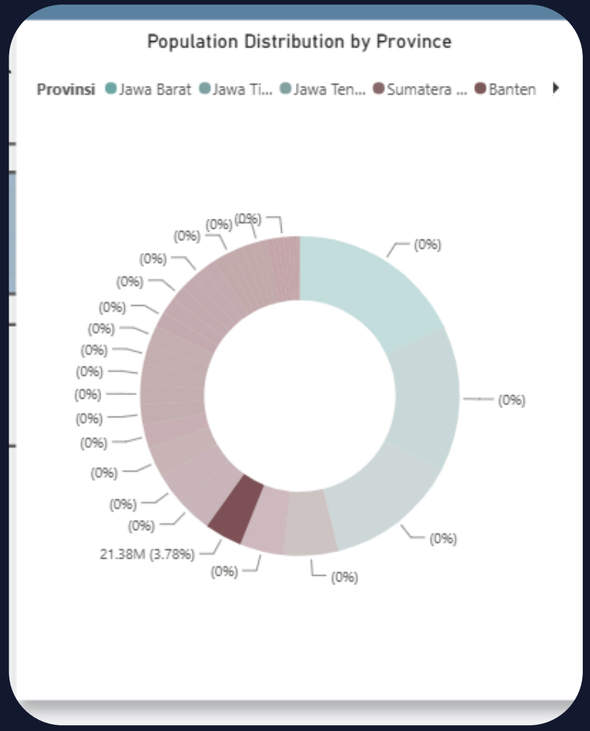

04 **Track Monthly Price Trends**

05 **Automate Interactive Reporting**

Jakarta Holds the Value

DKI Jakarta offers the strongest purchasing power in the dataset while keeping price pressure relatively low, with a 2025 price index of 106.85. It is the clearest sweet spot between wages and costs.

Rp 5.2 M Highest Minimum Wage

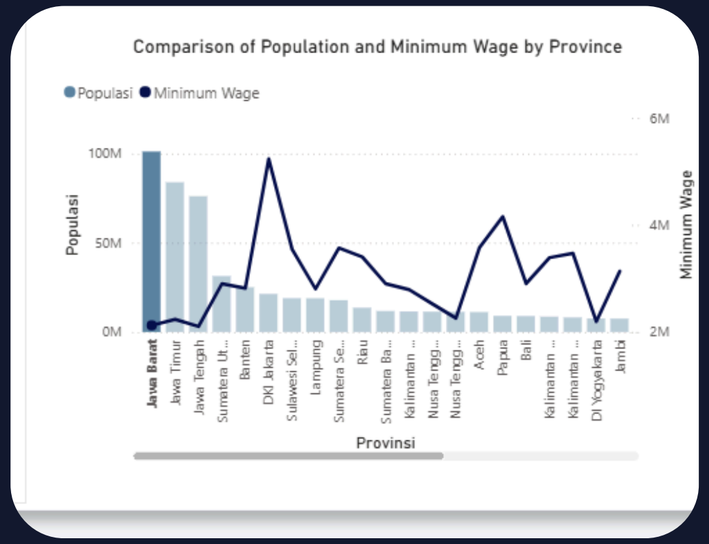

Jakarta's minimum wage is the highest of all provinces, roughly 2.5 times that of Jawa Barat.

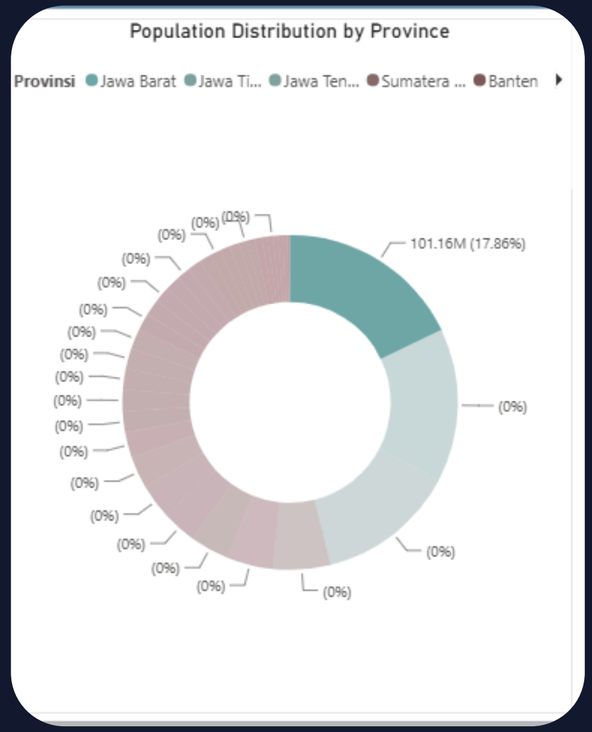

3.8% Share of Population

Despite the top wage, Jakarta holds only about 3.8% of the population, so its value comes from spending power, not volume.

Java Holds the Volume

Jawa Barat, Jawa Timur, and Jawa Tengah are the largest markets by population. Their scale is attractive, but wages in these provinces sit near the bottom of the range.

17.9% Jawa Barat Population Share

Jawa Barat alone holds the largest share of the population in the dataset, with a minimum wage of around Rp2.1M.

46% Top Three Java Provinces

Jawa Barat, Jawa Timur, and Jawa Tengah together hold nearly half of the population, making them the main volume markets.

Small Markets with Strong Fundamentals

Papua and Kepulauan Bangka Belitung pair strong wages with low price pressure. Their small populations make them better suited to niche or premium entry.

Rp4.2M

Papua's minimum wage averages about Rp4.2M, with a 2025 price index of 105.58.

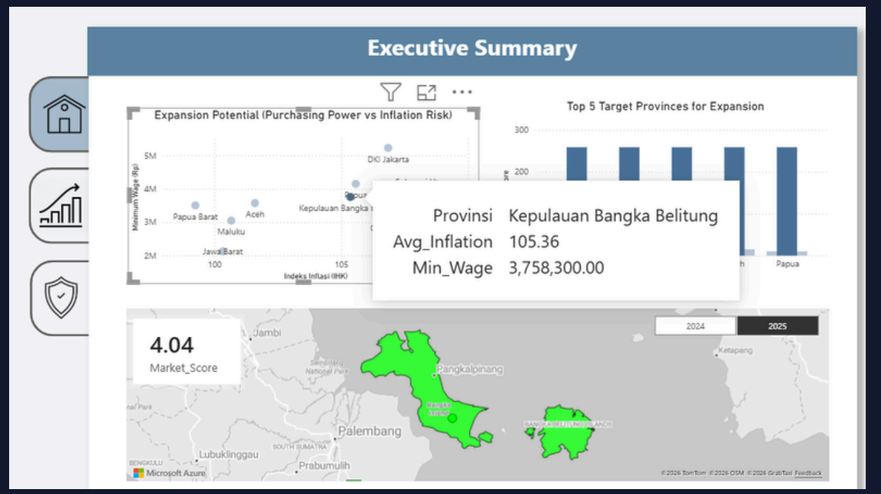

Rp3.8M

Kepulauan Bangka Belitung minimum wage about Rp3.8M, with a 2025 price index of 105.36.

105.5 Low Price Pressure

Both provinces sit near a price index of 105.5, on the lower side of the scatter plot, which helps protect margins.

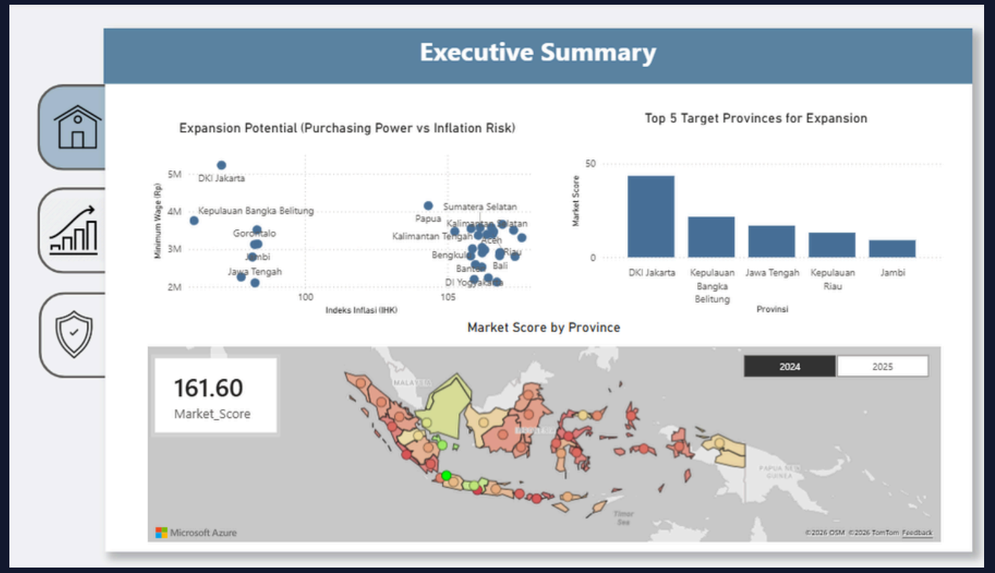

How the Top Five Changes Between 2024 and 2025

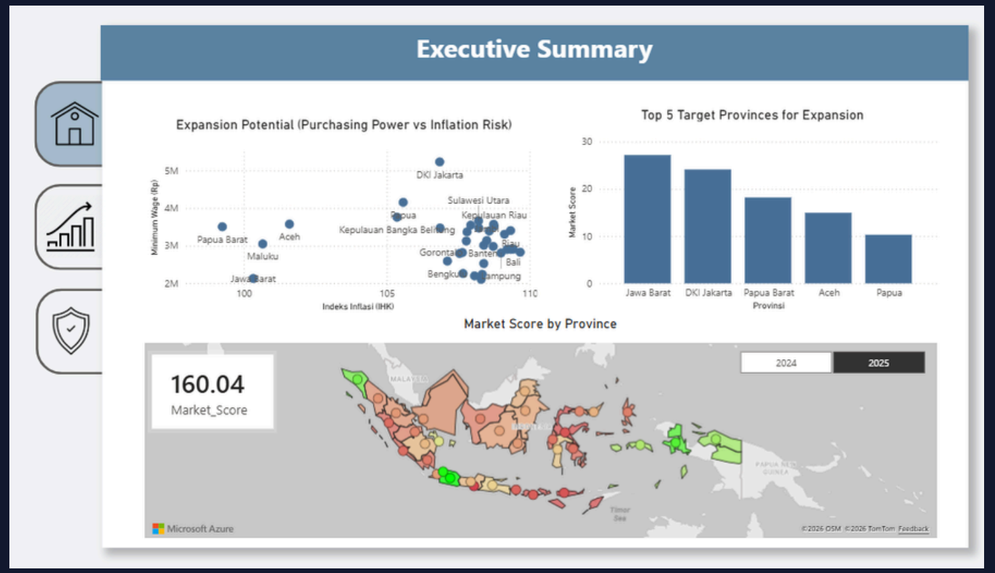

In 2024 the top five were led by DKI Jakarta, followed by Kepulauan Bangka Belitung, Jawa Tengah, Kepulauan Riau, and Jambi. In 2025 the ranking shifts to Jawa Barat, DKI Jakarta, Papua Barat, Aceh, and Papua. The scatter plot moves toward higher price pressure in 2025, while DKI Jakarta remains in the top five in both years.

In 2025 the ranking reshuffles. Jawa Barat moves into first place, with DKI Jakarta in second, followed by Papua Barat, Aceh, and Papua. The scores are also more evenly spread, so the lead of a single province is much smaller than in the previous year.

Because wage and population values stay the same across both years, these shifts come mainly from the inflation component of the score. In the scatter plot, the price index axis extends further to the right in 2025, which shows that price pressure rose across many provinces and reshaped which ones look attractive. DKI Jakarta is the only province that stays in the top five in both years, which makes it the most consistent performer in the analysis.

The takeaway for decision makers is that an expansion ranking is not fixed. A province that looks strongest in one year can lose ground when price pressure changes, so this dashboard is best used as a regular monitoring tool rather than a one-time snapshot.

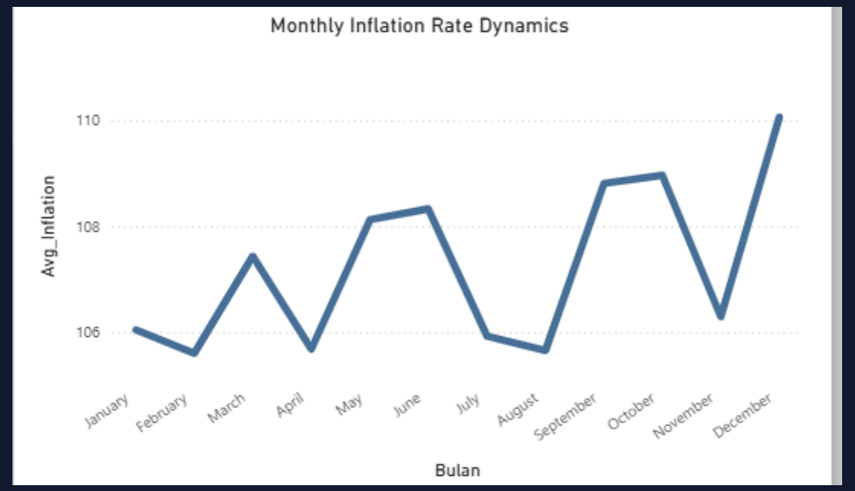

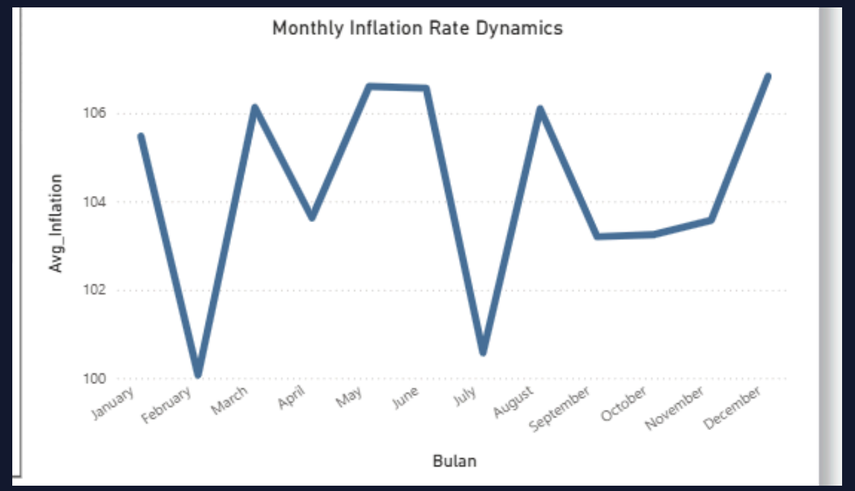

Prices Peak at Year End

The monthly line chart shows December as the highest point in both 2024 and 2025, with prices climbing in the final months of each year. In 2025, price levels sit clearly above those of 2024 for most of the year, which shows that cost pressure was not only seasonal but also built up from one year to the next.

This pattern is a useful signal for cost budgeting and for timing new openings. A business planning to enter a province can expect higher operating costs toward year end and adjust its budget and launch schedule accordingly. Switching between years on the dashboard makes it easy to compare how this rhythm changes.

Monthly Inflation Rate Dynamics (2024)

Monthly Inflation Rate Dynamics (2025)

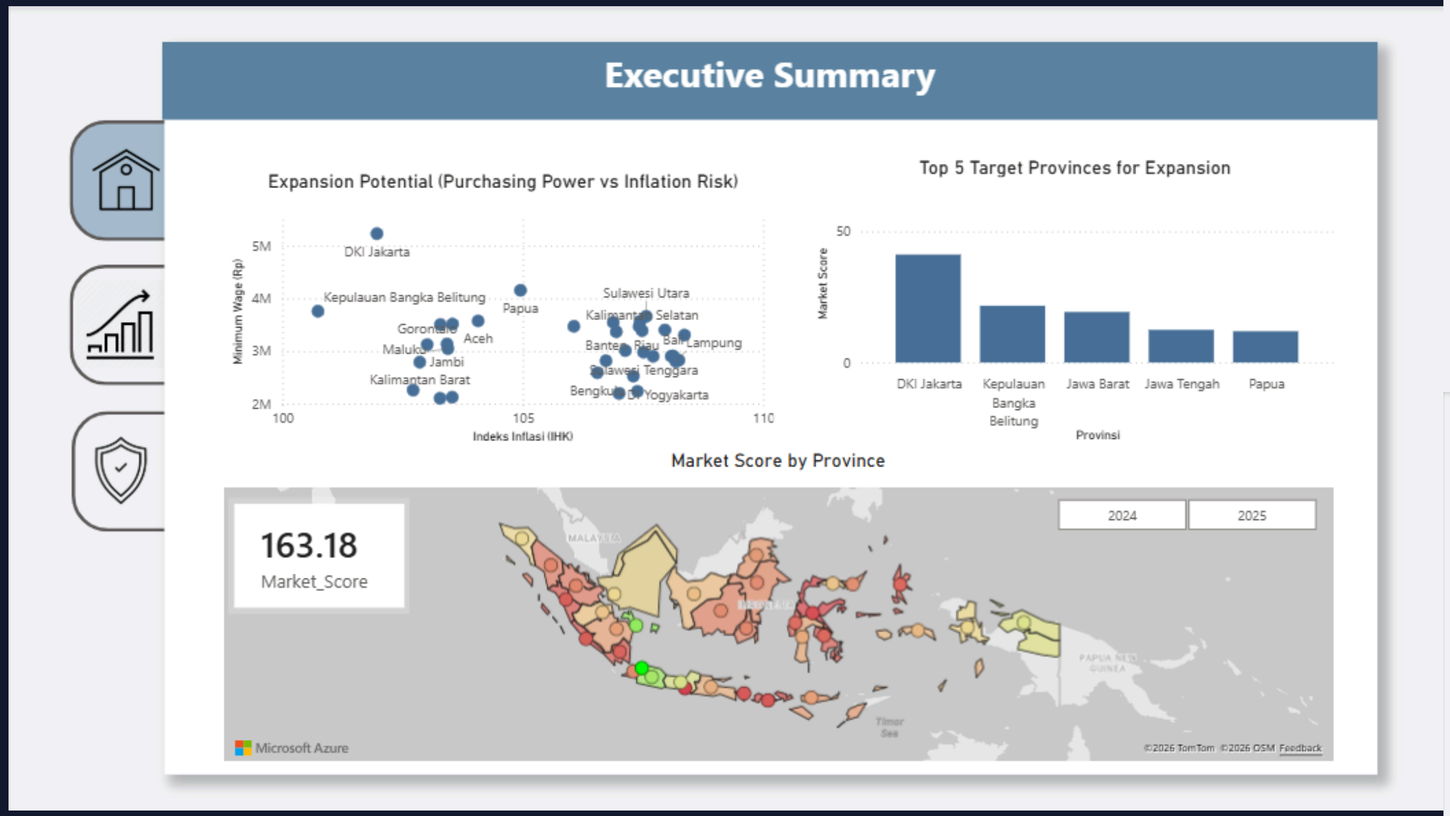

A Practical Expansion Playbook

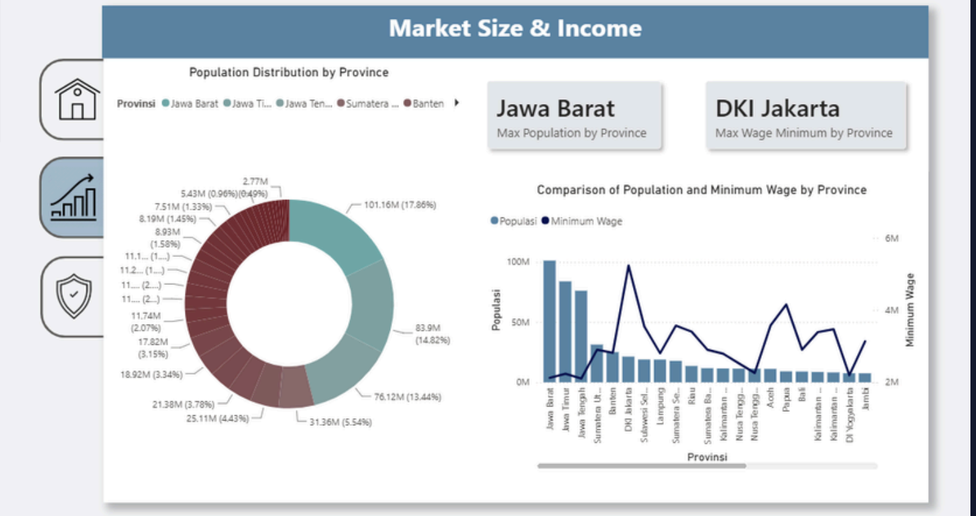

DKI Jakarta works as the core value market, with the strongest wages and low price pressure. Jawa Barat and its neighbors are the volume markets, best suited to scale-driven models. Papua and Kepulauan Bangka Belitung are niche premium options, and the highest-pressure provinces, such as Maluku Utara and Sulawesi Tengah, belong on the watchlist.

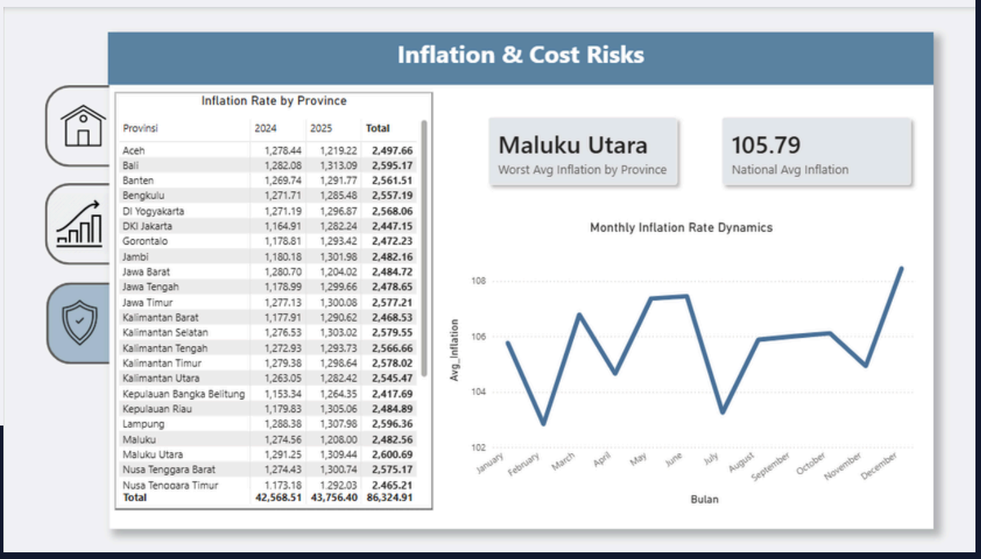

Limitations and Next Steps

The wage data is a provincial minimum wage, not average income, and the price index is relative to 2022 rather than a direct inflation rate or a measure of absolute cost of living. The Market_Score weights are a modeling choice and would need business validation. Next steps are adding a year-on-year inflation measure, sector-level demand, and company-specific cost data.

Dashboard Documentation

Provinsi	2024	2025	Total
Aceh	1,278.44	1,219.22	2,497.66
Bali	1,282.08	1,313.09	2,595.17
Banten	1,269.74	1,291.77	2,561.51
Bengkulu	1,271.71	1,285.48	2,557.19
DI Yogyakarta	1,271.19	1,296.87	2,568.06
DKI Jakarta	1,164.91	1,282.24	2,447.15
Gorontalo	1,178.81	1,293.42	2,472.23
Jambi	1,180.18	1,301.98	2,482.16
Jawa Barat	1,280.70	1,204.02	2,484.72
Jawa Tengah	1,178.99	1,299.66	2,478.65
Jawa Timur	1,277.13	1,300.08	2,577.21
Kalimantan Barat	1,177.91	1,290.62	2,468.53
Kalimantan Selatan	1,276.53	1,303.02	2,579.55
Kalimantan Tengah	1,272.93	1,293.73	2,566.66
Kalimantan Timur	1,279.38	1,298.64	2,578.02
Kalimantan Utara	1,263.05	1,282.42	2,545.47
Kepulauan Bangka Belitung	1,153.34	1,264.35	2,417.69
Kepulauan Riau	1,179.83	1,305.06	2,484.89
Lampung	1,288.38	1,307.98	2,596.36
Maluku	1,274.56	1,208.00	2,482.56
Maluku Utara	1,291.25	1,309.44	2,600.69
Nusa Tenggara Barat	1,274.43	1,300.74	2,575.17
Nusa Tenggara Timur	1,173.18	1,292.03	2,465.21
Total	**42,568.51**	**43,756.40**	**86,324.91**

THANK YOU!!

Great expansion is not about where people are, but where value and stability meet.
